POST-DOCTORAL SCIENTIST POSITION IN MOLECULAR IMMUNOLOGY AND SIGNAL TRANSDUCTION

The GIGA (http://www.giga.ulg.ac.be/) is seeking for a POST-DOCTORAL SCIENTIST POSITION IN MOLECULAR IMMUNOLOGY AND SIGNAL TRANSDUCTION

Established in 2007 at the University of Liège, GIGA is an interdisciplinary research center in biomedical sciences whose mission is advanced medical innovation. The institute encompasses more than 500 members (PI, senior researchers, post-doctoral scientists, thesis students, technicians) with expertise in medical genomics, in silico medicine, neuroscience, cancer, infection and immunity, and cardiovascular sciences. GIGA also offers technology platforms, business facilities and a training center. The center offers an extraordinary range of services on the same site, where researchers, clinical doctors, doctoral students, students and private sector actors meet.

GIGA is the only Belgian research center directly integrated within a university hospital, making it a major player in translational research where links between researchers and doctors are at the heart of the research activity.

Missions and profile

The Laboratory of Molecular Immunology and Signal Transduction is seeking a motivated postdoctoral fellow to study the role of the immune system in liver homeostasis and cell death (necroptosis and ferroptosis). This project is part of an integrated multidisciplinary project research program funded by the Excellence of Science (EOS) that includes renown collaborators in the field of cell death and iron metabolism (group of Peter Vandenabeele/Mathieu Bertrand/Tom Vanden Berghe and the Raffaella Gozzelino’s laboratory).

The candidate should have a PhD in Life Sciences and a strong experience in liver physiology, liver metabolism, molecular biology and mouse models.

The appointment is for 2 (+1) years and is available immediately.

How to apply?

Please send a motivation letter, your CV and 2 recommendation letters to e.dejardin@uliege.be
